REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The limitation of Claim 1 reciting "the joined second substrate includes a free upper side which is turned away from said first substrate during the flow of the glass into the recesses of said structured surface of said first substrate" is not disclosed or reasonably suggested in the cited prior art.

Nor does the cited prior art disclose or reasonably suggest a method of structuring surfaces wherein a negative pressure throughout the joining process of a first and second glass substrate is preserved, after joining in the recesses of the surface of said first substrate, between said first substrate and said second substrate of glass, as recited in claim 14.

Nor does the cited prior art disclose or reasonably suggest a method of structuring surfaces wherein a first glass substrate is joined to a flat surface of a second glass substrate and annealing the joined substrates as recited in claim 40.

The closes prior art such as Budinski, the preform 114 is pressed by the upper mold half during flow of the glass. Hence, it does not have a free surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
